1 Use Case Diagram

2 Class Diagram

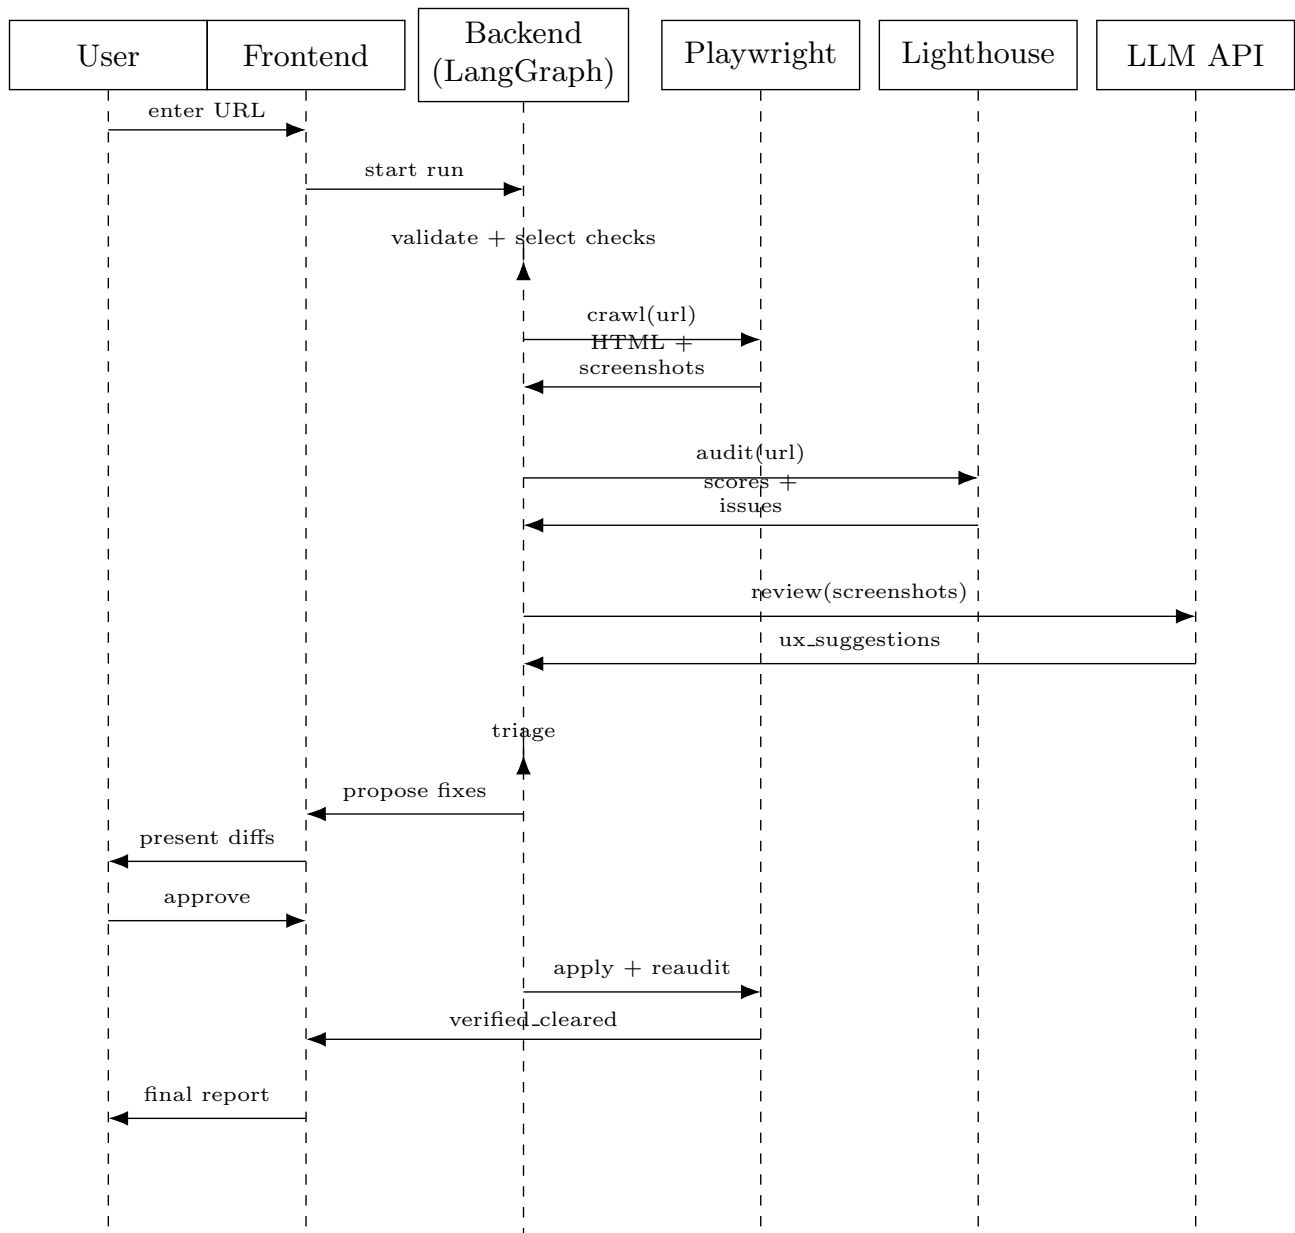

Reflects the Pydantic schema layer (`models/schemas.py`) that forms the shared LangGraph state.

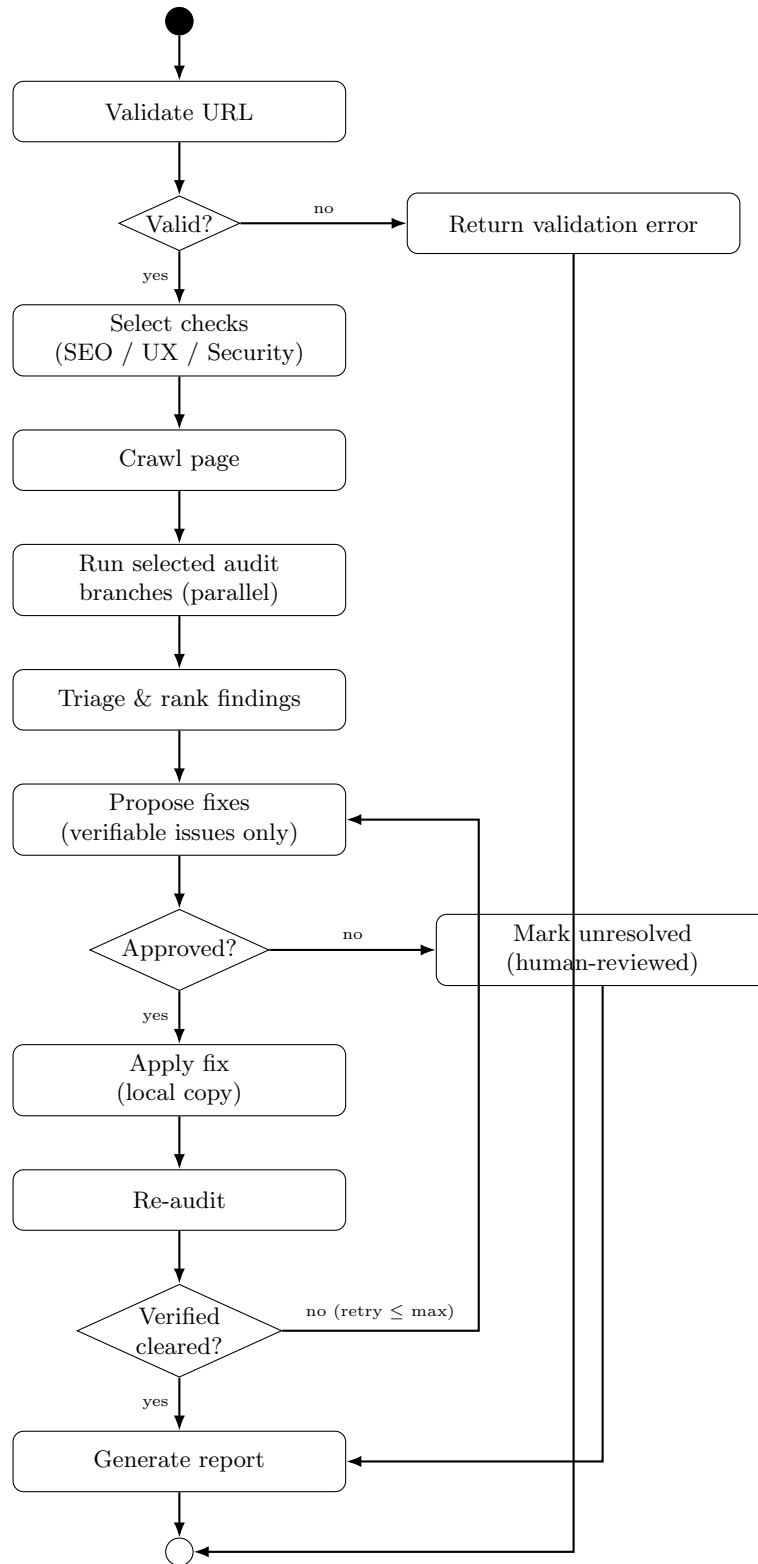

Note: `Fix.issue_id` is a reference (not a UML composition) back to a specific `Issue`; a `Fix` is never associated with a `UXSuggestion`, per the mechanical-vs-judgment distinction established in the SRS/SDD.

3 Sequence Diagram

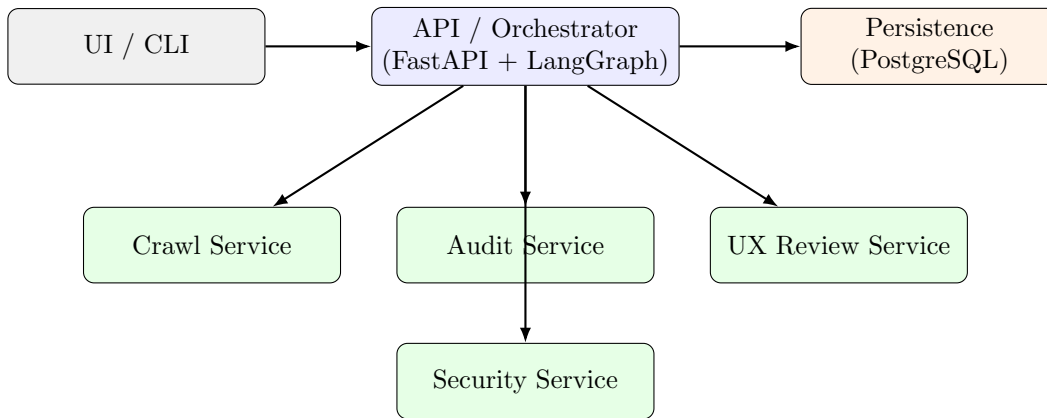

End-to-end flow for a combined SEO + UX run through fix approval.

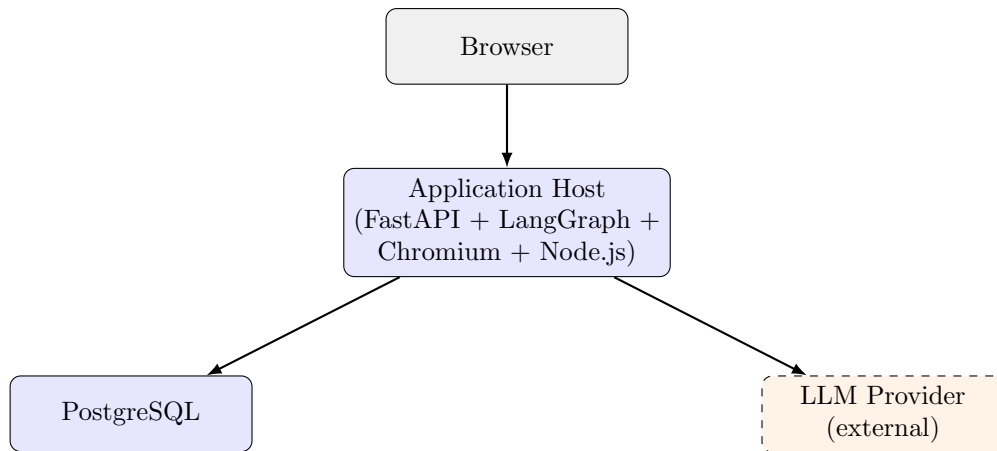

4 Activity Diagram

5 Component Diagram

6 Deployment Diagram

The current local-execution version collapses all "Application Host" sub-components onto a single developer machine, with no separate database tier (see SDD §6 for the target hosted topology).
